How can we support your clients ?

Psychological & Functional Capacity Assessments

We provide psychological assessment for children, adolescents and adults presenting with functional impairments due to developmental concerns and/or lifelong disabilities affecting aspects of mobility, communication, socialisation, learning, self-care and self management.

Our assessments quantify cognitive, emotional, behavioural and functional aspects to support diagnostic clarity, functional capacity and appropriate care planning.

We provide functional capacity reports to support NDIS planning, school-based supports and multidisciplinary care.

Assessment Approach

Our assessments are individualised and focus on how a person's disability impacts their day-to-day functioning, using clinical interviews, standardised tools and information from parents, carers, schools or work and other relevant sources.

Assessments are conducted using National best practice clinical guidelines and DSM-5-TR criteria, guided by NDIS Quality and Safeguarding Framework to provide a functional, real-world understanding of needs.

Report and functional outcomes

A structured written repo:rt is provided, outlining strengths, areas of need, and functional impact across key areas of daily living.

Reports are written in clear, functional language to support understanding across families, schools, providers and support coordinators.

Reports outline functional needs in line with NDIS access requirements and facilitate coordinated care planning.

Our aim is to provide clear, practical information that assist informed decision making.

To enquire or refer, please email: ***reception@adhd.com.au*** or call us ***(03) 9848 9100***

Supporting an NDIS participant?

Contact BNC to discuss assessments and reports for NDIS participants.
